Experience

● **07/2021–Present**

Java developer
TCS

develop and add new functionalities for the home depot POS

● **04/2015–07/2021**

Java web developer, Java full Stack
Mundoterra

-Some of the most important projects that i have developed and give updates:

Sales POS TerraSoftWeb (System which allows our stores to sell out items.)
- *Client registration:* the client is registered based on a form.
- *keep apart:* inventory movement available=>keep apart=>sold.
- *Sales POS:* you can sell the customer's products with different forms of payment.
- *Returns:* the customer can return the product for any reason and the system generates a credit note to be able to pay for another product.
- *Transfers:* the system can transfer products between the different stores affecting their inventory.
- *Reports:* many reports where you can see inventory, movements and sales.
- *Audit:* reports and auditing application.
- *Generate tickets:* ticket printing on printer.

App Audit (app android for a honeywell device)
- *Scan products:* The user scans all items.
- *Audit application:* Compare the shot made against the store's inventory and generate a report with the differences found.

Pedidos en Línea (system which allows customers to select items online)
- *Keep apart:* The user requests the model and the system keep apart the model in the indicated store.

● **04/2014–04/2015**

BD support boss
Mundoterra
